

Stock Solution Shopping & Prep List

14-Day Dosing Schedule | 2 May – 15 May 2026 | 150 Gallon Reef

Generated: May 02, 2026

Section 1 — Mix from Powder Before Day 1

These four stock solutions must be freshly mixed from powder and RODI water before starting the schedule. Mix in a borosilicate glass beaker with a magnetic stirrer. Weigh powder and RODI water by grams on a kitchen scale (1 ml water = 1 gram). Wear gloves and eye protection. Allow CaCl₂ solution to cool completely before use — mixing is exothermic.

BRS Sodium Bicarbonate (Alk pump stock)		Supplier: Bulk Reef Supply	Use: Alk dosing pump — 14 days
Powder needed: 196 g NaHCO ₃	RODI needed: 2,009 ml (2.01 L)	Total stock: 2,009 ml	Ratio: 97.75 g per 1,000 ml RODI
Mixing notes: Mix in two batches of ~1,000 ml each. Stir until fully dissolved. Store in labelled sealed container. Shelf life ~4 weeks once mixed.			

BRS Calcium Chloride (Ca pump stock)		Supplier: Bulk Reef Supply	Use: Ca dosing pump — 14 days
Powder needed: 128 g CaCl ₂	RODI needed: 2,413 ml (2.41 L)	Total stock: 2,413 ml	Ratio: 52.84 g per 1,000 ml RODI
Mixing notes: EXOTHERMIC — solution gets hot when mixing. Allow to cool fully before adding to pump reservoir. Mix in two batches of ~1,200 ml each.			

Brightwell Potassion-P (Potassium stock)		Supplier: Brightwell Aquatics	Use: Day 1 correction dose only
Powder needed: 14 g Potassion-P	RODI needed: 139 ml	Total stock: 139 ml	Ratio: 100 g per 1,000 ml RODI
Mixing notes: Simplest to mix 100 g in 1,000 ml RODI and measure out 139 ml. Remaining stock can be stored for next correction cycle.			

BRS General-Adjustment Magnesium Mix (Magnesium stock)		Supplier: Bulk Reef Supply	Use: Day 1 correction dose only
Powder needed: 153 g Mag-Mix	RODI needed: 382 ml	Total stock: 382 ml	Ratio: 400 g per 1,000 ml RODI
Mixing notes: Dense solution — mix thoroughly with magnetic stirrer until fully clear. Allow to cool before dosing. Remaining from a larger batch stores well sealed.			

Section 2 — Reef Moonshiners Correction Elements (Ready to Use)

These are pre-made RM stock solutions — no mixing required. Check current stock levels against amounts needed. All from Reef Moonshiners store: andremueller.e-junkie.com

Product	14-Day Total	500ml Bottles	Active Days	Notes
RM Barium	138.1 ml	1 bottle	Days 1–4	34.52 ml/day → sump
RM Fluoride	477.0 ml	1 bottle (just fits)	Days 1–9	53.00 ml/day → sump. Largest correction volume.
RM Strontium UHP	49.4 ml	1 bottle	Days 1–5	9.88 ml/day → sump
RM Molybdenum	6.8 ml	1 bottle	Day 1 only	6.81 ml single dose → sump

Product	14-Day Total	500ml Bottles	Active Days	Notes
RM Caesium	2.1 ml	1 bottle	Days 1–2	1.04 ml/day → sump
RM Zinc	2.7 ml	1 bottle	Days 1–3	0.91 ml/day → sump. Treat as monthly routine.
RM Nickel	71.3 ml	1 bottle	All 14 days	Days 1–2: 2.67 ml/day correction → tank. Days 3–14: 5.5 ml/day maintenance → tank.

Section 3 — Reef Moonshiners Daily Elements (Ready to Use)

Pre-made RM stock solutions dosed daily into display tank. Check stock levels — Manganese NANO requires 2 bottles for 14 days. Iron: Classic requires 1 bottle; Iron-X (10x) needs only 24.5 ml if switching to pump.

Product	Daily Dose	14-Day Total	Bottles Needed	Notes
RM Manganese NANO	40 ml/day	560 ml	2 x 500ml	Largest daily volume. Only element requiring 2 bottles.
RM Copper NANO	24 ml/day	336 ml	1 x 500ml	Sensitive — never overdose. Once at 0.50, reduce to ~19.5 ml/day.
RM Iron Classic	17–18 ml/day	245 ml	1 x 500ml	OR use Iron-X (10x) at 1.7 ml/day — only 24.5 ml needed.
RM Iron-X (10x) [alternative]	1.7 ml/day	23.8 ml	1 x 500ml (lasts ~7 months)	Recommended if setting up dosing pump — much more practical volume.
RM Cobalt NANO	10 ml/day	140 ml	1 x 500ml	Crashed between tests — ensure continuous supply.
RM Chromium Classic	1.7 ml/day	23.8 ml	1 x 500ml (lasts ~6 months)	Small volume — 500ml bottle lasts well over 6 months.
RM Selenium Classic	0.6 ml/day	8.4 ml	1 x 500ml (lasts ~2 years)	Very small volume — bottle lasts a long time.
RM Vanadium	9–10 drops/day	~3.8 ml	1 bottle	Cobalt-blue dropper bottle. Adjust dose from ICP to ICP.

Section 4 — Third-Party Products

Product	Supplier	14-Day Need	Notes
Seachem Reef Iodide	Seachem (Amazon/LFS)	~1.7 ml (drops only)	3–5 drops/day into display tank. Cobalt-blue glass dropper bottle recommended. DO NOT substitute with any other product — use Seachem ONLY. Buy small bottles — oxidises after opening. Keep sealed and stored dark.
BRS NaHCO3 Powder (Sodium Bicarbonate)	Bulk Reef Supply	196 g	Standard baking-grade NaHCO3 also works but pharma-grade BRS preferred for purity. Lasts well if kept dry and sealed.
BRS CaCl2 Powder (Calcium Chloride)	Bulk Reef Supply	128 g	BRS Pharma Grade only — lower grades contain impurities. Brightwell Calcion-P was disqualified Summer 2023.
BRS General-Adjustment Magnesium Mix	Bulk Reef Supply	153 g	400g in 1L RODI stock solution. Only recommended Mg product. Brightwell Magnesium-P disqualified Summer 2023.
Brightwell Potassium-P	Brightwell Aquatics	14 g (mix 100g in 1L)	100g in 1L RODI. Mix full 1L batch, dose 139 ml, store remainder for next correction.
pH 7.00 Calibration Buffer	BRS / any reef supplier	1 sealed packet	For monthly pH probe recalibration. Must be fresh and sealed — do not use opened/old buffers. Use once and discard.

Product	Supplier	14-Day Need	Notes
pH 10.00 Calibration Buffer	BRS / any reef supplier	1 sealed packet	pH 10.00 absorbs CO2 quickly once opened — buy small single-use packets if possible.
KCl Storage Solution (3M or saturated)	Any lab/reef supplier	Small bottle	For storing pH probe tip between calibrations. Never store probe in RODI or dry — will damage reference junction.
Cobalt-Blue Glass Dropper Bottles (2oz)	Amazon / grocery store	2 bottles	One for Iodine (Seachem Reef Iodide), one for Vanadium. Protects light-sensitive solutions. 1 drop = 0.03 ml.

Section 5 — Complete Shopping Checklist

Category	Product	Quantity Needed	In Stock?	Ordered ?
RM Elements	RM Barium	1 x 500ml bottle	☐	☐
RM Elements	RM Fluoride	1 x 500ml bottle ■ uses almost full bottle	☐	☐
RM Elements	RM Strontium UHP	1 x 500ml bottle	☐	☐
RM Elements	RM Molybdenum	1 x 500ml bottle	☐	☐
RM Elements	RM Caesium	1 x 500ml bottle	☐	☐
RM Elements	RM Zinc	1 x 500ml bottle	☐	☐
RM Elements	RM Nickel	1 x 500ml bottle	☐	☐
RM NANO/Daily	RM Manganese NANO	2 x 500ml bottles ■ NEED TWO	☐	☐
RM NANO/Daily	RM Copper NANO	1 x 500ml bottle	☐	☐
RM NANO/Daily	RM Cobalt NANO	1 x 500ml bottle	☐	☐
RM NANO/Daily	RM Iron Classic	1 x 500ml bottle (OR Iron-X — see note)	☐	☐
RM NANO/Daily	RM Iron-X (10x)	1 x 500ml bottle (alternative to Classic)	☐	☐
RM NANO/Daily	RM Chromium Classic	1 x 500ml bottle (lasts ~6 months)	☐	☐
RM NANO/Daily	RM Selenium Classic	1 x 500ml bottle (lasts ~2 years)	☐	☐
RM NANO/Daily	RM Vanadium	1 bottle	☐	☐
BRS Powders	BRS NaHCO3	196 g minimum (buy 1 kg bag for future)	☐	☐
BRS Powders	BRS CaCl2 Pharma Grade	128 g minimum (buy 1 kg bag for future)	☐	☐
BRS Powders	BRS Mag-Mix	153 g minimum (buy 454g/1lb bag)	☐	☐
Brightwell	Brightwell Potassion-P	100 g minimum (buy 250g bag)	☐	☐
Seachem	Seachem Reef Iodide	1 small bottle (buy small — oxidises)	☐	☐
Equipment	Cobalt-blue dropper bottles 2oz	2 bottles	☐	☐

Category	Product	Quantity Needed	In Stock?	Ordered ?
Equipment	pH 7.00 buffer (sealed)	1–2 single-use packets	☐	☐
Equipment	pH 10.00 buffer (sealed)	1–2 single-use packets	☐	☐
Equipment	KCl storage solution	1 small bottle	☐	☐

Important reminders before Day 1: Mix all four powder solutions (NaHCO₃, CaCl₂, Potassion-P, Mag-Mix) ahead of time. Fill cobalt-blue dropper bottles with Iodine and Vanadium. Confirm pH probe is calibrated (recalibrate monthly with fresh buffers). Check all RM element bottles have sufficient stock. Manganese NANO is the only element requiring 2 x 500ml bottles for 14 days. Iron Classic (245 ml) or Iron-X (24.5 ml) — choose one format only. All corrections go into the sump. All dailies go into the display tank. Never pre-mix elements together.
